

Milestone 2 Session 1

AI-generated notes

- **Onboarding to Andamio and Cardano Wallet Setup:** James led the team, including Anna, Lucia, Jordi, Yoram, and Eric, through the process of setting up Cardano wallets, minting Andamio access tokens, and ensuring everyone could access the platform to begin collaborative work.
 - **Wallet Setup Guidance:** James provided step-by-step instructions for installing the Eternal Cardano wallet extension, guiding Anna, Jordi, and others through language, currency, and security settings, and emphasizing the importance of securely storing the recovery phrase.
 - **Troubleshooting Wallet Issues:** The group encountered and resolved several technical issues, such as network restrictions and missing wallet addresses, with Anna and James collaborating to resync the wallet and test different network connections until the wallet was operational.
 - **Minting Access Tokens:** After wallet setup, James sent ADA to participants so they could mint their Andamio access tokens, explaining the transaction process, the significance of the access token, and addressing questions about transaction costs and password usage.
 - **Platform Access and Role Assignment:** Once access tokens were minted, James added each participant as a teacher to the FCB Fan Engagement course, ensuring everyone could log in and begin editing content, and confirming successful onboarding for all team members.
- **Collaborative Editing of Learning Targets and Course Structure:** James introduced the FCB Fan Engagement draft course in Andamio Studio, and the team, including Anna, Jordi, and Yoram, discussed and began refining the learning targets, focusing on clarity, language, and alignment with both blockchain requirements and fan engagement goals.
 - **Course Structure Overview:** James demonstrated the course structure in Andamio Studio, explaining the modular approach with cycles, learning targets, assignments, and lessons, and highlighting the importance of backwards design in curriculum development.

- **Learning Targets on Blockchain:** The team discussed the significance of learning targets being stored on-chain as credentials, emphasizing the need for precise language since these cannot be changed after publishing, while lessons and assignments remain editable.
- **Language and Marketing Considerations:** Anna, Jordi, and Yoram debated the balance between clear, direct language and more marketable or culturally resonant terms, considering the use of Catalan and English, and the implications for both blockchain records and fan understanding.
- **Editing and Review Process:** The group agreed to collaboratively review and refine the learning targets over the coming days, with James outlining the plan to finalize these by Friday and to align with the brand and identity departments before minting credentials.
- **Design Exploration for Fan Experience:** James presented four design prototypes for the fan-facing app, gathering feedback from Anna, Jordi, and Yoram on visual style, usability, and alignment with FC Barcelona's brand, and set the stage for further iteration based on team preferences.
 - **Prototype Presentation:** James showcased four distinct design directions (A, B, C, D) for the fan campus app, illustrating both mobile and desktop layouts, and explained the rationale behind each aesthetic choice.
 - **Team Feedback and Preferences:** Anna and Jordi expressed preferences for the bold editorial and clean premium designs, discussing how color schemes and layout might appeal to different fan demographics and align with FC Barcelona's identity.
 - **Next Steps for Design Iteration:** James proposed to further refine the designs, focusing on the most favored options and preparing updated versions for the next meeting, with the goal of integrating real course content into the chosen design.
- **Planning and Next Steps for Course Development:** James outlined the immediate and upcoming tasks for the team, including finalizing learning targets, reviewing course modules, and preparing for credential minting, with a clear schedule for Thursday and Friday sessions.

- **Meeting Schedule and Milestones:** James confirmed the plan to review and finalize learning targets on Thursday, mint credentials when ready, and shift focus to fan experience design and content creation on Friday, ensuring all team members are aligned on deliverables.

Tasks:

- **Learning Targets Language Review:** Review and refine the language of the learning targets for all four modules, considering both marketing appeal and clarity, and prepare versions in both English and Catalan for final decision before putting them on the blockchain. (the team)
- **Internal Content Validation:** Coordinate with the identity and brand departments to ensure the accuracy and appropriateness of the learning targets and credentials, especially regarding the use of Catalan terms and their translation for international audiences. (the team)
- **Design Iteration Feedback:** Provide feedback on the A and B design prototypes and suggest any preferred combinations or adjustments for review in the next meeting. (the team)
