

Milestone 2 Session 3

AI-generated Notes

- **Milestone 2 Deliverables and Onboarding Progress:** James, Lucia, and the team reviewed the requirements for Milestone 2, including onboarding progress, training session recordings, and the documentation needed for submission to Catalyst, ensuring all outputs are tracked and evidence is available for review.
 - **Milestone 2 Requirements:** James outlined the main deliverables for Milestone 2, which include onboarding the Barça Vision team, developing the Learn-to-Work program, approving modules and work opportunities, and setting up a treasury. The team confirmed that all training sessions are recorded and stored on SharePoint for evidence.
 - **Onboarding Evidence and Documentation:** Yoram asked about session recording for evidence, and Lucia confirmed that all sessions are saved and accessible. James emphasized the importance of maintaining documentation and combining relevant documents into a final PDF for submission.
 - **Next Steps for Submission:** James and Lucia agreed that the final documents for Milestone 2 will be reviewed and finalized in a follow-up meeting, with Lucia coordinating consensus among the team before submission to Catalyst.
- **Technical Training on Lessons and Assignments:** James provided a technical walkthrough for the team on how to create, edit, and approve lessons and assignments in the Andamio platform, highlighting the flexibility of assignments and the use of AI for assessment.
 - **Assignment Creation and Assessment:** James demonstrated how to create assignments that are easy to assess, such as requiring photos, Discord posts, or social media evidence. Lucia raised the possibility of using AI to assess more complex responses, and James confirmed that AI support will be integrated for efficiency.
 - **Lesson Authoring Process:** James explained that each learning target should have a corresponding lesson, which can include text, images,

and videos. The platform allows for flexible editing and focus mode for detailed content creation.

- **Credential Approval and Blockchain Integration:** James showed how approving a module locks the learning targets and generates a credential hash, which is then minted on the blockchain. Any change to the learning targets updates the hash, ensuring integrity.
- **Student Assessment Workflow:** James described the teacher's view for reviewing student submissions, with options to accept or deny assignments. The team discussed the potential for batch processing with AI agents to streamline the review process.
- **Defining and Expanding Work Opportunities for Fans:** Lucia, Yoram, and James discussed the definition of 'work opportunities' for fans, emphasizing participation, empowerment, and skill-building rather than traditional employment, and explored examples such as moderation, user-generated content, and launching initiatives.
 - **Clarifying Work Opportunities:** Lucia cautioned against using 'work' to imply employment, suggesting instead roles like Discord moderation, helper roles, and creative or Web3-related opportunities. James and Yoram agreed, framing work as participation and engagement.
 - **Empowerment and Initiative Launching:** The team discussed empowering fans to start their own initiatives, apply for Catalyst proposals, and participate in governance, with support from the club and the possibility of learning from the team's own experiences with Catalyst.
 - **User-Generated Content and Democratic Participation:** Lucia proposed leveraging user-generated content (UGC) as assignments, allowing fans to create content on marked topics or respond to requests for proposals, fostering creativity and democratic engagement.
 - **Integration with Broader Initiatives:** Yoram highlighted opportunities for collaboration with organizations like UNDP and UNHCR, and the potential for fans to engage in projects related to sustainability and social impact, such as the Plastiks initiative.
- **Review and Refinement of Learning Targets and Curriculum Cycles:** James, Lucia, and the team reviewed and refined the learning targets for cycle 2 and

discussed the narrative flow across all cycles, ensuring alignment with Barça's values and practical application of Web3 concepts.

- **Cycle 2 Learning Targets:** The team reviewed draft learning targets for cycle 2, focusing on topics such as blockchain-based environmental impact, distinguishing impact-driven NFTs, advancing gender equity, and designing awareness campaigns.
- **Narrative and Sequence Alignment:** Lucia and James discussed the narrative sequence, ensuring that each cycle builds on the previous one, moving from club history and values to practical participation and campaign design, and culminating in global engagement.
- **Incorporating Real-World Examples:** Lucia suggested using real examples like the Masterpiece NFTs and the Plastiks project to illustrate learning targets, and the team agreed to include these as case studies to make the curriculum more tangible.
- **Final Review Process:** The team agreed to conduct an internal review of the learning targets and curriculum documents, with Lucia coordinating feedback and James supporting the finalization for submission and credential minting.
- **Next Steps and Meeting Planning:** The team agreed on next steps, including internal review of documents, scheduling a follow-up meeting for consensus and finalization, and James preparing a demo of the app with integrated learning targets for the next session.
 - **Internal Review and Consensus:** Lucia will coordinate the team's internal review of the learning targets and curriculum documents, aiming for consensus before the next meeting.
 - **Scheduling and Preparation:** The team will align on the best time for the next meeting, and James will prepare a demo of the app with the current learning targets for further refinement.
- **Visit from Cardano CEO and Presentation Planning:** Lucia informed the team that Frederick, CEO of Cardano, will visit Barcelona on July 17th, and suggested preparing a project progress presentation for the occasion.
 - **CEO Visit Announcement:** Lucia shared that Frederick, Cardano's CEO, will visit Barcelona and expressed the importance of presenting the team's progress, even if briefly, during the visit.

- **Team Alignment for Presentation:** James and the team agreed to ensure that a meaningful project update is ready for the visit, aligning this milestone with their ongoing deliverables.

Tasks:

- **Milestone 2 Document Finalization:** Review and finalize the learning targets and related documents as a team, then schedule a follow-up meeting to conduct a final review and consensus before submission to Catalyst. (Lucia, the team)
- **App Prototype Development:** Build the actual app prototype incorporating the current draft of learning targets and prepare a demo for the next meeting. (James)
- **Internal Review of Learning Targets:** Conduct an internal review of the learning targets, make suggestions (e.g., language adjustments), and ensure the final version is ready for inclusion in the Catalyst report. (Lucia, the team)
- **Scheduling Next Meeting:** Align internally on the best time for the next meeting and send the invite to the team. (Lucia)
