

0. Introduction

The Learn-to-Work Program is designed as a *guided journey* that takes fans from curiosity to empowerment by welcoming them into Barça's digital ecosystem and giving them the tools, confidence, and opportunities to take an active role in it. Each cycle represents a chapter in this story, progressively opening the door to deeper participation, practical skills, and meaningful contribution.

At the heart of this story is Barça's ambition to **empower its global fanbase through real Barça use cases** — from participation models, to digital content flows, to community-led initiatives, to Web3-enabled recognition systems that make every contribution visible and verifiable. Through this program, fans learn *about* technology and engagement; as well as how to **apply it directly to Barça experiences**, discovering how the club's values translate into digital actions they can take themselves.

The four cycles gradually introduce fans to **Web3 concepts, on-chain credentials, rewards, and Barça's emerging digital infrastructure**, as practical tools they can use to collaborate, contribute, or lead. As the cycles progress, fans move from understanding and participating to **building, supporting, and shaping** community initiatives — effectively bridging Barça's offline passion with its new digital opportunities.

The common thread connecting all four cycles is empowerment: giving fans the skills and pathways to engage more deeply with Barça and to see themselves not only as supporters, but as **active participants in Barça's digital future**, grounded in the club's identity, values, and expanding ecosystem of use cases.

1. Cycle 1 — Introduction & Community Onboarding

This first cycle invites fans into the story of Barça itself: its history, identity, and values as *Més que un club*. By grounding learners in the cultural legacy of FC Barcelona, the cycle strengthens emotional connection and shared purpose. Fans begin their journey not with technology, but with meaning: understanding where Barça comes from, what it stands for, and how their own voice fits into that tradition. This foundation sets the tone for all following cycles by showing that every digital action, Web3 tool, or community contribution ultimately serves Barça's long-standing mission and spirit.

1.1 Objectives

- Describe the historical moments that shaped FC Barcelona's identity.
- Explain the meaning and relevance of *Més que un club* as a living motto.
- Identify how FC Barcelona's core values translate into present-day action
- Describe how fan communities, such as “penyes” contribute to FC Barcelona’s cultural identity.

1.2 Duration

Estimated duration: 4 weeks

This cycle consists of four short learning units, each paired with a single guided interaction or reflection task, designed for global participation with flexible time commitment.

1.3 Target Skills

- Cultural and institutional literacy
- Values-based reasoning
- Community awareness and identification
- Reflective participation in shared narratives

2. Cycle 2 — Participation & Engagement Foundations

“Use Cases: Sustainability, Empowerment, and the Future of Barça Values”

Cycle 2 expands the story from *what Barça is* to *what Barça does in the world*. Here, fans explore real Barça use cases that embody the club’s values: environmental impact through partnerships like Plastiks, and women empowerment in sport and society. Fans see how these missions translate into digital participation: Web3 tools that track sustainability impact, NFTs used to certify plastic recovery, community storytelling that amplifies female leadership. This cycle teaches fans that Web3 is not abstract technology but rather a practical way to make Barça’s values transparent, measurable, and globally participatory.

2.1 Objectives

- Describe how visibility campaigns advance gender equity in professional sport.
- Distinguish impact-driven NFTs from speculative NFTs.
- Explain how blockchain-based partnerships certify real-world environmental impact.
- Design an awareness campaign that connects an institutional value to a call to action.

2.2 Duration

Estimated duration: 4 weeks

The cycle is structured around four learning units progressing from understanding to creation, with optional community challenges enabling applied engagement.

2.3 Target Skills

- Impact literacy in digital and Web3 contexts
- Critical evaluation of value-driven versus speculative digital assets
- Narrative and visibility strategy fundamentals for social impact
- Values-to-action campaign design

3. Cycle 3 — Applied Contribution Skills

“From Local Communities to Digital Worlds — Web3 as a Bridge, Not a Barrier”

Cycle 3 focuses on uniting two types of fans: those who live in Discord and digital spaces every day, and those whose Barça identity is rooted offline — in penyes, local traditions, family rituals, stadium culture. This cycle reframes digitalization as an amplifier instead of a replacement: a way to carry real-world passion into global, connected formats. Fans learn Web3 fundamentals using community-friendly analogies, discovering that wallets, NFTs, and blockchain are simply public tools for recognition, identity, and trust. The goal is to reduce fear for newcomers while helping digital-native fans develop leadership and empathy in welcoming others.

3.1 Objectives

- Show why decentralized, permanent systems make communities more durable and resilient.
- Explain how the NFTs held in a Web3 wallet can function as a verifiable record of participation.
- Explain how portable identity empowers people to make connections.
- Show an example of how interoperability allows people to collaborate.

3.2 Duration

Estimated duration: 4 weeks

Each unit introduces one concept, paired with guided explanation or discussion tasks that emphasize clarity, accessibility, and translation over technical depth.

3.3 Target Skills

- Digital literacy and concept translation
- Community-first thinking
- Inclusive communication of technical concepts
- Confidence navigating foundational Web3 ideas

4. Cycle 4 — Leadership & Advanced Contribution

“Web3 in Action — Designing Barça’s Next Use Cases Together”

The final cycle brings the story to its culmination: fans are invited to explore real Web3 use cases already emerging within Barça Vision and to imagine new community-ready models inspired by them. By this point, participants can connect abstract concepts (wallets, NFTs, smart contracts) to **actual Barça applications**: digital collectibles, credentialing systems, fan engagement mechanisms, on-chain loyalty. This cycle empowers fans to think creatively about how these tools can serve their own communities—locally or globally. In doing so, they don’t just learn Web3; they become co-authors of how Barça’s digital future can take shape.

4.1 Objectives

- Describe how Barça Vision leads innovation in Web3 engagement.
- Distinguish credential badges from digital collectibles.
- Share ideas for how to improve community initiatives through Web3 technology.
- Use credential badges to create new engagement opportunities for a global network of fans.

4.2 Duration

Estimated duration: 4 weeks

This capstone cycle emphasizes synthesis and proposal design, supported by examples from active and emerging Barça Vision initiatives

4.3 Target Skills

- Systems thinking for participation design
- Applied Web3 use-case modeling
- Strategic engagement framing
- Leadership through community-driven proposals
